CHAPTER THIRTEEN II

13.2.0 CSS Border Width

13.2.1 CSS Border Width

The `border-width` property specifies the width of the four borders.

The width can be set as a specific size (in px, pt, cm, em, etc) or by using one of the three pre-defined values: thin, medium, or thick:

Example

Demonstration of the different border widths:

```
<!DOCTYPE html>
<html>
    <head>
        <style>
            p.one {
                border-style: solid;
                border-width: 5px;
            }

            p.two {
                border-style: solid;
                border-width: medium;
            }

            p.three {
                border-style: dotted;
                border-width: 2px;
            }

            p.four {
                border-style: dotted;
                border-width: thick;
            }

            p.five {
                border-style: double;
                border-width: 15px;
            }

            p.six {
                border-style: double;
```

```
                border-width: thick;
            }
        </style>
    </head>
    <body>

        <h2>The border-width Property</h2>
        <p>This property specifies the width of the four borders:</p>
        <p class="one">Some text.</p>
        <p class="two">Some text.</p>
        <p class="three">Some text.</p>
        <p class="four">Some text.</p>
        <p class="five">Some text.</p>
        <p class="six">Some text.</p>
        <p><b>Note:</b> The "border-width" property does not work if it is
        used alone.
        Always specify the "border-style" property to set the borders first.</p>
    </body>
</html>
```
The border-width Property

THis Property specifies the width of the four borders:

> Some Text

> Some Text

> Some Text

> •Some Text

> Some Text

> Some Text

NOTE: The "border-width" property does not work if it is used alone.

Always specify the "border-style" property to set the borders first.

13.2.2 Specific Side Widths

The `border-width` property can have from one to four values (for the top border, right border, bottom border, and the left border):

```
<!DOCTYPE html>
<html>
    <head>
        <style>
            p.one {
                border-style: solid;
                border-width: 5px 20px; /* 5px top and bottom, 20px on the sides */
            }

            p.two {
                border-style: solid;
                border-width: 20px 5px; /* 20px top and bottom, 5px on the sides */
            }
            p.three {
                border-style: solid;
                border-width: 25px 10px 4px 35px; /* 25px top, 10px right, 4px bottom and 35px left */
            }
        </style>
    </head>
    <body>
        <h2>The border-width Property</h2>
        <p>The border-width property can have from one to four values (for the top border, right border, bottom border, and the left border):</p>
        <p class="one">Some text.</p>
        <p class="two">Some text.</p>
        <p class="three">Some text.</p>
    </body>
</html>
```
