CHAPTER TEN

10.0   CSS COMMENT

CSS comments are not displayed in the browser, but they can help document your source code.

10.1   CSS Comments

Comments are used to explain the code, and may help when you edit the source code at a later date.

Comments are ignored by browsers.

A CSS comment is placed inside the `<style>` element, and starts with `/*` and ends with `*/`:

Example

```
<!DOCTYPE html>
<html>
    <head>
        <style>
            /* This is a single-line comment */
            p {
                color: red;
            }
        </style>
    </head>
    <body>
        <p>Hello World!</p>
```
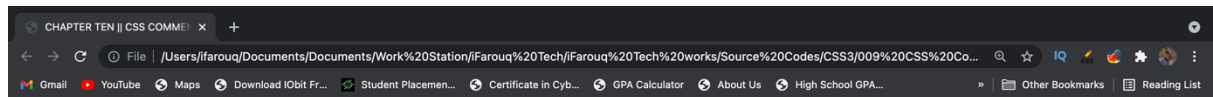

<p>This paragraph is styled with CSS.</p>

<p>CSS comments are not shown in the output.</p>

</body>

</html>

Hello World

THis paragraph is styled with CSS.

CSS Comments adre not shown in the output

You can add comments wherever you want in the code:

Example

```html
<!DOCTYPE html>
<html>
<head>
<style>
p {
    color: red;  /* Set text color to red */
}
</style>
</head>
<body>
    <p>Hello World!</p>
    <p>This paragraph is styled with CSS.</p>
    <p>CSS comments are not shown in the output.</p>
</body>
</html>
```

Hello World

THis paragraph is styled with CSS.

CSS Comments adre not shown in the output

Comments can also span multiple lines:

Example

```
<!DOCTYPE html>

<html>

        <head>

                <style>

                        /* This is

                        a multi-line

                        comment */

                        p {

                                color: red;

                        }

                </style>
```
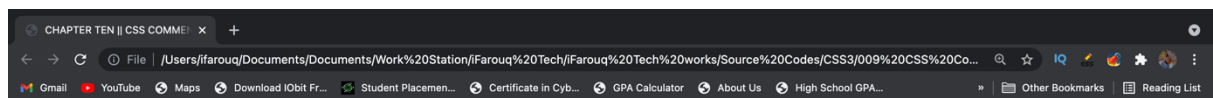

</head>

<body>

    <p>Hello World!</p>

    <p>This paragraph is styled with CSS.</p>

    <p>CSS comments are not shown in the output.</p>

</body>

</html>

Hello World

THis paragraph is styled with CSS.

10.2   HTML and CSS Comments

From the HTML tutorial, you learned that you can add comments to your HTML source by using the `<!--...-->` syntax.

In the following example, we use a combination of HTML and CSS comments:

Example

```html
<!DOCTYPE html>
<html>
    <head>
        <style>
            p {
                color: red; /* Set text color to red */
            }
        </style>
    </head>
    <body>
        <h2>My Heading</h2>
        <!-- These paragraphs will be red -->
        <p>Hello World!</p>
        <p>This paragraph is styled with CSS.</p>
        <p>HTML and CSS comments are not shown in the output.</p>
    </body>
</html>
```

My Heading

Hello World

THis paragraph is styled with CSS.
